

Thanks for choosing Cheapass(TM) brand Chemistry Model Kits! Our kits contain barely enough pieces to make any molecule you might want\*, and we pass those savings on to you!

List of Contents:

- 1x It can be isomerized (skeletal) to make a common disinfectant
  - 1x Used to help some "socially lubricate"
  - 1x Precursor to tetraethyllead
  - 1x Activity of a microbe produces this along with holes in Swiss cheese
  - 1x Cliché science fair project combines this with baking soda
  - 1x Precursors of glyphosate include this organochlorine compound
  - 1x Utmost care must be used in working with this highly reactive component of thermobaric weapons
  - 1x Reagent used to make mustard gas via the Meyer method
  - 1x Inconveniently shares an abbreviation with a common DNA staining reagent
  - 1x Not just any old flat molecule, it also ripens fruit
  - 1x Excluding radioactive isotopes, it contains the heaviest halogen atom
  - 1x Not very useful as a monomer, but found in ropes, clothes, and carpets as a polymer
  - 1x Oily solvent in varnishes with a banana flavor
  - 1x Sorry about your hangover--blame this alcohol metabolite
- 19x bonds, with helpful chemical reactions listed  
10x hydrogen atoms

\*assuming you don't want to make more than one molecule
